Experiment:- 4

PROBLEM STATEMENT:-

Efficient file management is a critical requirement in Linux-based systems, especially for system administrators and cyber security professionals. Linux provides powerful command-line utilities that allow users to create, copy, move, rename, view, and delete files efficiently. Understanding these commands is essential for organizing data, managing logs, and automating tasks using scripts. The problem is to practice Linux commands for deleting, copying, moving, renaming, and displaying files, and to understand the use of input/output redirection for managing command outputs.

Aim:- Deleting, Copying, Moving and Renaming files in linux

Procedure:-

1. Log in to the Linux system and open the terminal.

2. Create a working directory: mkdir file_ops , cd file_ops

```
ubuntu@seema:~$ mkdir file_ds
ubuntu@seema:~$ cd file_ds
```

3. Create files using touch

```
ubuntu@seema:~$ cd file_ds
ubuntu@seema:~/file_ds$ touch file8.txt file9.txt
```

4. Add content to files using redirection.

```
ubuntu@seema:~/file_ds$ echo "this is file8" > file8.txt
ubuntu@seema:~/file_ds$ echo "this is file9" > file9.txt
```

5. Display file contents.cp

```
ubuntu@seema:~/file_ds$ cat file8.txt
this is file8
ubuntu@seema:~/file_ds$
```

6. Copy a file.

```
ubuntu@seema:~/file_ds$ cp file8.txt copy_file8.txt
ubuntu@seema:~/file_ds$
```

7. Rename a file

```
ubuntu@seema:~/file_ds$ mv file9.txt renamed_file9.txt
ubuntu@seema:~/file_ds$
```

mv

8. Move a file to another directory: mkdir backup mv copy_file1.txt backup/

mkdir

```
ubuntu@seema:~/file_ds$ mkdir backup
```

9. Append content to a file: echo "Additional content" >> file1.txt

```
ubuntu@seema:~/file_ds$ echo "additional content" >> file8.txt
ubuntu@seema:~/file_ds$
```

10. Delete a file: rm renamed_file2.txt

r

```
ubuntu@seema:~/file_ds$ rm renamed_file9.txt
ubuntu@seema:~/file_ds$
```

11. Verify changes using: Ls

```
ubuntu@seema:~/file_ds$ ls
backup  copy_file8.txt  file8.txt
ubuntu@seema:~/file_ds$
```

Expected Output

- Files created, copied, renamed, and deleted successfully.
- File contents displayed correctly.
- Output redirection works as expected.

Result

Linux file operations including copying, moving, renaming, deleting files, and output redirection were successfully performed using command-line utilities.
